

REPORT OF YOUR HEART HEALTH PARAMETERS

Thank you for taking part in the **OCORO Heart Study**. This report is a summary of information we collected from your study kit and the questionnaires you filled out.

Please remember, the information in this report is for **research use only**. It is not meant to be a medical diagnosis, a guide for treatment, or a replacement for your doctor's advice.

We are sharing this report is to be open and clear about the research. If you have any questions or worries about your health, you should talk to your healthcare provider.

30 Days

12/21/25 - 01/19/26

60 Days

01/20/26 - 02/18/26

90 Days

02/19/26 - 03/20/26

Your Protocol Adherence

Your clinical study adherence shows how well you're following the plan we've created for capturing your data. It includes wearing the proper devices and taking measurements at the right time. This ensures the data is accurate and reliable. If you have questions about your study protocol, please reach out to Prolaio at support@prolaio.com.

0 hours

out of 24 days of expected bracelet data collection

You collected little or no data.

✓ We're done collecting bracelet data for this cycle.

12 of 12

questionnaires completed

Stay at it!

You completed half of your questionnaires. Your responses provide important insights that can help identify patterns and predict health outcomes.

✓ We're done collecting questionnaires for this cycle.

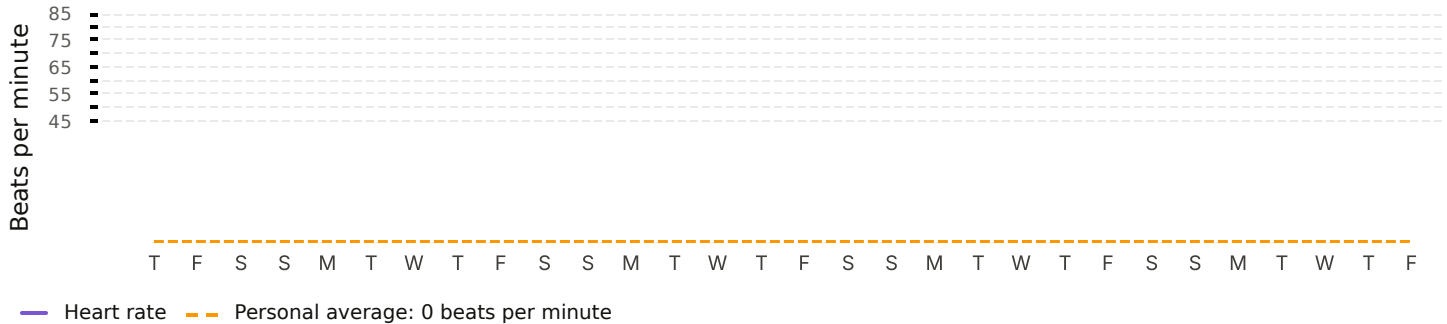

Sleeping Heart Rate

This shows how hard your heart works when you appear to be resting or sleeping. It is measured in beats per minute.

Stress, medications, medical conditions, and age all affect your resting heart rate.

* Achieving a "deep-sleep state" gives your heart a chance to rest, relax, and recover.

Resting Respiratory Rate

This shows how the heart and lungs work together when you're resting, not exercising. It is measured in breaths per minute.

* Alcohol can effect your respiratory rate.

** Normal ranges show the typical values for healthy adults. Your results are compared against these ranges to help spot unusual patterns or potential health concerns.

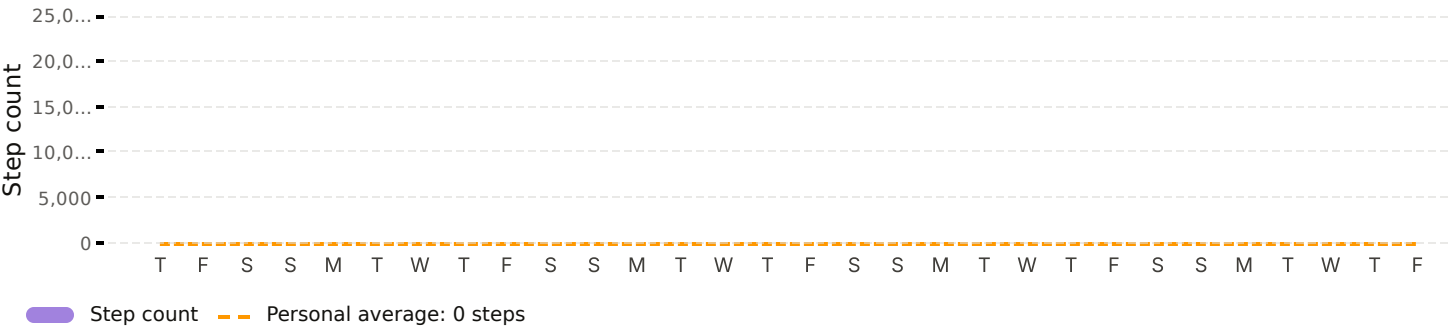

Steps

Counting steps is a popular way of measuring progress. This data is collected with sensors in the bracelet.

While the goal of 10,000 steps per day is widely promoted, the right amount can be different for everyone.

* A JAMA Network Open study tracked individuals for over ten years and demonstrated that taking at least 7,000 daily steps was associated with enhanced wellness when compared to people with lower daily step counts.

Activity

Regular low- to moderate-intensity activity is important for overall health. Following physical activity guidelines can improve mood and cognition.

Your bracelet measures activity by tracking total time with an elevated heart rate using its built-in sensors.

* Studies suggest that adults who follow the recommended physical activity guidelines have a 21% lower risk of premature death. These guidelines typically recommend at least 150 minutes of moderate-intensity exercise per week.

** Normal ranges show the typical values for healthy adults. Your results are compared against these ranges to help spot unusual patterns or potential health concerns.

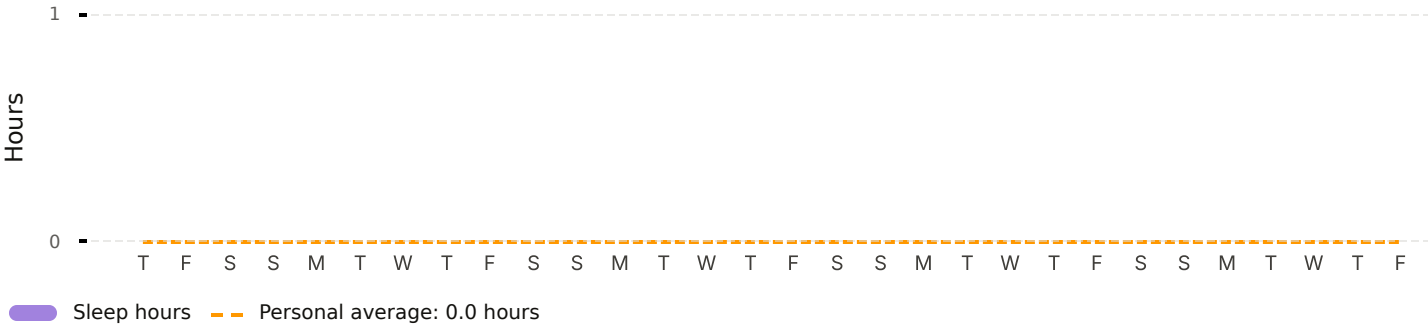

Sleep Hours

Quality sleep fuels your body and mind—boosting energy, focus, mood, and resilience.

It supports immunity, heart health, and recovery, making it essential for overall well-being every day.

* Not getting enough sleep can also mean that you don't get enough of the hormones that help children grow and help adults and children build muscle mass, fight infections, and repair cells.

Monitoring results summary / monthly average

Measurement	First Period Date Period: Dec 21 - Jan 19		Second Period Date Period: Jan 20 - Feb 18		Third Period Date Period: Feb 19 - Mar 20	
	AVG	Lowest & Highest Value	AVG	Lowest & Highest Value	AVG	Lowest & Highest Value
Sleeping Heart Rate, <i>beats/min</i> Your lowest heart rate overnight	0.0	0.0 - 0.0	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Resting Heart Rate, <i>beats/min</i> Average heart rate when you're not moving around	0.0	0.0 - 0.0	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Maximum Daily Heart Rate, <i>beats/min</i> The highest heart rate in a day	0.0	0.0 - 0.0	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Resting Respiratory Rate, <i>breaths/min</i> Your number of breaths per minute on average while not moving around and not sleeping	0.0	0.0 - 0.0	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Blood pressure*, <i>mmHg</i> The force your heart uses to pump blood through your body	125	113 - 130	0.0	0.0 - 0.0	0.0	0.0 - 0.0
	80	73 - 85	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Weight, <i>pounds</i> Tracking for large and unexpected changes	196	195 - 198	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Steps, <i>steps/day</i> The steps you've walked	0.0	0.0 - 0.0	0.0	0.0 - 0.0	0.0	0.0 - 0.0
Activity, <i>hours/day</i> Your level of movement	0.0	0.0 - 0.0	0.0	0.0 - 0.0	0.0	0.0 - 0.0

*Blood Pressure is measured in systolic (top number) and diastolic (bottom number.)

Symptom Questionnaire

Question	SAT - SAT 02/21 - 02/28	SAT - SAT 02/28 - 03/07	SAT - SAT 03/07 - 03/14	SAT - SAT 03/14 - 03/21
1. Over the past 7 days, how have you been feeling overall?				
I feel great; I have no health issues.				
I feel good, but I have a few minor health issues.	✓	✓	✓	✓
I don't feel very well.				
2. Since your last check-in, have you had any new or worsening symptoms? (Select all that apply)				
No, I feel the same.	✓	✓	✓	✓
Yes-Shortness of breath				
Yes-Swelling in your ankles, feet, or legs				
Yes-Dizziness or feeling faint				
Yes-Feeling more tired than usual				
3. Have you had any changes to your medication for your heart or blood pressure?				
No	✓	✓	✓	✓
Yes				
4. If you answered yes to the above question, what changes have occurred with your medications? (Select all that apply)				
I started a new medication				
The dosage of an existing medication changed				
A medication was discontinued				
Other change
