

REPORT OF YOUR HEART HEALTH PARAMETERS

Thank you for taking part in the **OCORO Heart Study**. This report is a summary of information we collected from your study kit and the questionnaires you filled out.

Please remember, the information in this report is for **research use only**. It is not meant to be a medical diagnosis, a guide for treatment, or a replacement for your doctor's advice.

We are sharing this report is to be open and clear about the research. If you have any questions or worries about your health, you should talk to your healthcare provider.

30 Days

• 03/21/26 - 04/19/26

•

60 Days

• 04/20/26 - 05/19/26

•

90 Days

05/20/26 - 06/18/26

Your Protocol Adherence

Your clinical study adherence shows how well you're following the plan we've created for capturing your data. It includes wearing the proper devices and taking measurements at the right time. This ensures the data is accurate and reliable. If you have questions about your study protocol, please reach out to Prolaio at support@prolaio.com.

13 days **18** hours

out of 24 days of expected bracelet data collection

Thank you!

We've captured some of your bracelet data, but we need more during the next cycle.

✓ We're done collecting bracelet data for this cycle.

6 of 8

questionnaires completed

Stay at it!

You completed half of your questionnaires. Your responses provide important insights that can help identify patterns and predict health outcomes.

✓ We're done collecting questionnaires for this cycle.

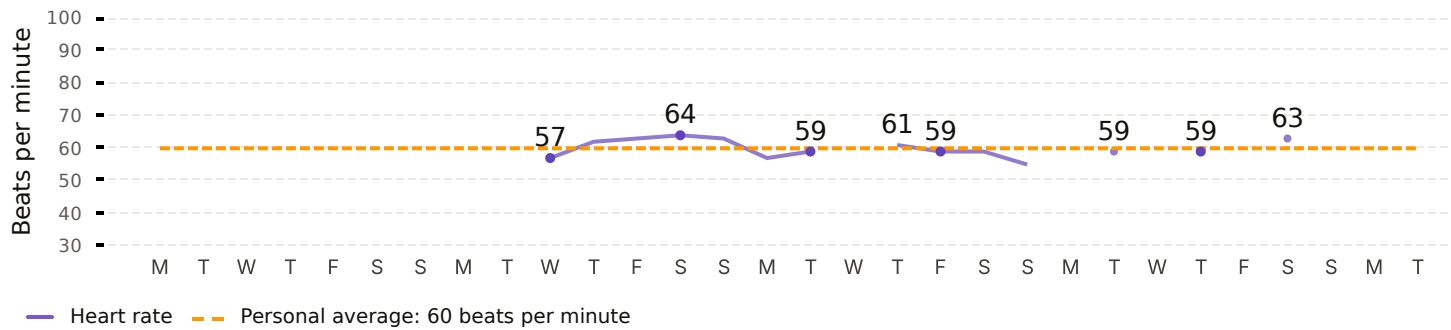

Sleeping Heart Rate

This shows how hard your heart works when you appear to be resting or sleeping. It is measured in beats per minute.

Stress, medications, medical conditions, and age all affect your resting heart rate.

* Hydration is important! If you are dehydrated, your sleeping heart rate may be elevated.

Resting Respiratory Rate

This shows how the heart and lungs work together when you're resting, not exercising. It is measured in breaths per minute.

* Certain medications can cause your respiratory rate to become slower because they act as a depressant on your central nervous system.

** Normal ranges show the typical values for healthy adults. Your results are compared against these ranges to help spot unusual patterns or potential health concerns.

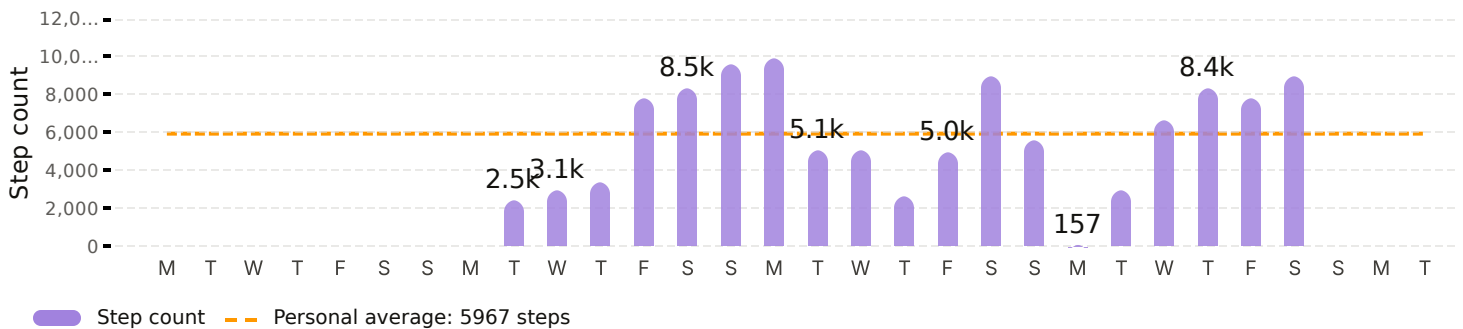

Steps

Counting steps is a popular way of measuring progress. This data is collected with sensors in the bracelet.

While the goal of 10,000 steps per day is widely promoted, the right amount can be different for everyone.

* Among older adults, taking ~6000 to 9000 steps per day was associated with 40% to 50% lower risk of cardiovascular disease, compared with taking ~2000 steps per day. Please consult your healthcare provider before making changes to your activity level as the right amount of activity may be different for everyone.

Activity

Regular low- to moderate-intensity activity is important for overall health. Following physical activity guidelines can improve mood and cognition.

Your bracelet measures activity by tracking total time with an elevated heart rate using its built-in sensors.

* Walking backwards can be more challenging and can help burn more calories than walking forward. Some research suggests that it provides a "cardio for your mind" workout, since it requires more concentration and can boost your mood.

** Normal ranges show the typical values for healthy adults. Your results are compared against these ranges to help spot unusual patterns or potential health concerns.

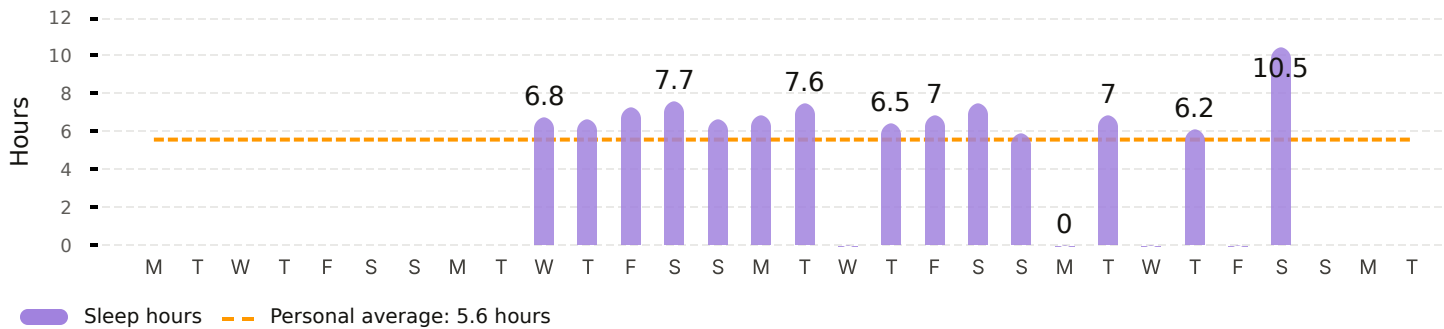

Sleep Hours

Quality sleep fuels your body and mind—boosting energy, focus, mood, and resilience.

It supports immunity, heart health, and recovery, making it essential for overall well-being every day.

* If you have trouble falling asleep, some experts suggest getting up and do a relaxing activity until you feel sleepy again. If you have ongoing sleep difficulties or questions about your sleep, talk to your health provider.

Monitoring results summary / monthly average

Measurement	First Period Date Period: Mar 21 - Apr 19		Second Period Date Period: Apr 20 - May 19	
	AVG	Lowest & Highest Value	AVG	Lowest & Highest Value
Sleeping Heart Rate, <i>beats/min</i> Your lowest heart rate overnight	0.0	0.0 - 0.0	60	48 - 82
Resting Heart Rate, <i>beats/min</i> Average heart rate when you're not moving around	0.0	0.0 - 0.0	57	51 - 72
Maximum Daily Heart Rate, <i>beats/min</i> The highest heart rate in a day	0.0	0.0 - 0.0	92	71 - 122
Resting Respiratory Rate, <i>breaths/min</i> Your number of breaths per minute on average while not moving around and not sleeping	0.0	0.0 - 0.0	16	8 - 28
Blood pressure*, <i>mmHg</i> The force your heart uses to pump blood through your body	122	117 - 128	0.0	0.0 - 0.0
	79	73 - 85	0.0	0.0 - 0.0
Weight, <i>pounds</i> Tracking for large and unexpected changes	202	201 - 203	0.0	0.0 - 0.0
Steps, <i>steps/day</i> The steps you've walked	0.0	0.0 - 0.0	5967	157 - 9974
Activity, <i>hours/day</i> Your level of movement	0.0	0.0 - 0.0	0.2	0.0 - 0.5

*Blood Pressure is measured in systolic (top number) and diastolic (bottom number.)

Symptom Questionnaire

Question	FRI - FRI 04/24 - 05/01	FRI - FRI 05/01 - 05/08	FRI - FRI 05/08 - 05/15	FRI - FRI 05/15 - 05/22
1. Over the past 7 days, how have you been feeling overall?				
I feel great; I have no health issues.				
I feel good, but I have a few minor health issues.	✓	✓	✓	✓
I don't feel very well.				
2. Since your last check-in, have you had any new or worsening symptoms? (Select all that apply)				
No, I feel the same.		✓	✓	✓
Yes-Shortness of breath				
Yes-Swelling in your ankles, feet, or legs	✓			
Yes-Dizziness or feeling faint				
Yes-Feeling more tired than usual				
3. Have you had any changes to your medication for your heart or blood pressure?				
No	✓	✓	✓	✓
Yes				
4. If you answered yes to the above question, what changes have occurred with your medications? (Select all that apply)				
I started a new medication				
The dosage of an existing medication changed				
A medication was discontinued				
Other change
